"What I think is happening is we're throwing the baby with the bathwater: the baby is the bolus, the bathwater is the infusion. And really what I'd like to do is protect the patient against the intraprocedural events with the Iib/IIIa bolus, and then get rid of it."

— Dr Jonathan D Marmur (State University of New York Health Science Center, Brooklyn)

Guidewire > GP Iib/IIIa inhibition: Time to drop the infusion?

Guidewire
New editorial fuels DES safety debate
 Oct 12, 2006 17:30 EDT / Stirring a pot already overflowing with conflicting opinions, Drs Sanjay Kaul and George Diamond suggest that drug-eluting stents may be doing away with a cosmetic problem and replacing it with an ever-present peril. In response, one expert calls their calculations "frankly irresponsible," while another says they're "right on the money."

Heart failure
Society releases guidelines for selection, care of cardiac transplant candidates
 Oct 12, 2006 13:45 EDT / Its comprehensive coverage of patients with
